K PAVAN KUMAR

Email: pavvankanamarlapudi@gmail.com

Contact: +91-8019620741.

OBJECTIVE

An Urge to work in an organization to efficiently leverage my skills gained through my experience and learning for better decision-making support for driving business growth.

PROFILE SUMMARY

- About **3.5 Years** of experience in **Data Science.**
- Currently working with **GSPANN Technologies Pvt Ltd.** as **Jr. Data Scientist** in Hyderabad.
- Pursued **DATA SCIENCE SPECALIZATION** from **JIGSAW ACADEMY.**
- **Google Cloud** Certified Professional **Data Engineer.**
- Pursuing **BIG DATA SPECALIZATION** certificate program from **JIGSAW ACADEMY.**
- Experience in **Python Programming, Machine Learning, Statistics, Regression-Linear, Logistic**
- **Tool and Techniques worked on**: Supervised and Unsupervised classification (Naïve Bayes, Support Vector Machines, Random Forest etc.), Regression.
- **Interest Areas**-Mathematics, Programming, Automation, Business Analytics, Data science, Statistical Modelling, Predictive Modelling, Text Mining, Machine Learning,

QUANTITATIVE SKILLS

• Logical and Analytical abilities	• Problem Solving skills
• Leadership	• Willingness to learn new things and apply
• Domain Knowledge: Manufacturing/Retail.	• Self-Starter and taking initiatives in building my own skills

ANALYTICAL SKILLS

• Statistics and Predictive Modelling-Linear and Logistic Regression, Hypothesis Testing, ANOVA.	• Machine Learning-Supervised and Unsupervised Learning • NLP
• Data Visualization-Matplotlib, Seaborn, ggplot2(R)	• Deep Learning (Keras)

TOOLS

• Python- Anaconda, Pandas, Scikit-Learn, NumPy, pyspark, selenium, Keras • Version Control System (Git & GitHub) • HTML, MS Office. • RPA (UiPath	• Packages used- dplyr, ggplot, tm etc. • R Project, R studio- R for Data mining and Analysis • Tableau

EDUCATION

Degree/Course	Institute/University	Year	Percentage
Data Science Specialization	Jigsaw Academy	2016-2017	-
B. Tech (Electrical & Electronics)	JNTUK, Kakinada	2012-2016	82.07%
12th	Sri Gayathri Jr College	2010-2012	93.40%
10th	G.C.S. S Jr College	2009-2010	93.00%

CERTIFICATIONS

- Certificate course from **JIGSAW ACADEMY** on **DATA SCIENCE.**
- Certified as **Advanced RPA Developer** from **UiPath.**
- Certified as **Google Cloud Professional Data Engineer** from **Google.**
- Pursuing **BIG DATA SPECALIZATION** from **JIGSAW Academy**.
- Pursuing **Deep Learning Specialization** from **Coursera**.
- Completed Certificate course from UDEMY on **PYTHON BOOTCAMP and PySpark**
- Completed Certificate course from UDEMY on **Complete MySQL for Data Science.**

PROFESSIONAL EXPERIENCE

GSPANN TECHNOLOGIES **Software Engineer - Data Scientist** **Jun-2017 to till date**

Project: **Strategically Determine Surged Price Pattern via Predictive Data Analytics**

Client: Lam Research Corporation, USA.

- Optimized manufacturing cost reduce complexity, and enable strategic decision making with the data-driven predictive analytics.
- By solving business problem through the combined power of Data Science and Machine Learning techniques. We analyzed the behavior of each supplier, as the price surge / extra fees was incrementing year-over-year (YOY).
- Moreover, we trained the predictive model (developed in Azure ML Studio) on historical data of purchases for last three years, which consists of purchase order data, supplier features and historical transactions, product features etc.
- This real-time estimation helped the client in reducing the expedited delivery expenses.
- Technologies Used: **R, Python, Jupyter Notebook (Anaconda) Azure ML Studio.**

Project: **Predicting Return Behavior of Customer after Repurchase using ML Techniques**
Client: Macy's INC, USA**.**

- It has been observed that some customers are re-purchasing a merchandize (which they have purchased sometimes back with a higher price) with an "I**ntent to return the repurchased merchandize**" to get a "**price adjustmen**t" against the "**merchandize purchased earlier**".
- The goal is to develop a solution that will offer a "proactive price adjustment" suggestion if the new transaction is a **"Repurchase with an intent to return for price adjustment"** pattern.
- For learning developed entire project workflow in **PySpark** too.
- Technologies Used: **R, Python, PySpark, Jupyter Notebook (Anaconda)**

Project**: Chatbot (B2C)**
Client: Bluebird Inc

- An automated response machine to instruct users to solve basics problems/incidents related to **Bluebird devices** by understanding contexts
- Benefits: This reduces (but not eliminates) dependence for incident resolutions, as well as can reduce number of services now tickets
  Features:
  - Context Based responses
  - Text and Image Iinstructions for better understanding
- Sample user queries implemented:
  - Blue Bird has Physical Damage
  - Blue Bird/How to Reboot
  - Blue Bird - Low Battery Symbol

Project: **Domain based NLP Chatbot for DevOps Operations**
Client: Kohl's INC Ltd.

- Worked as Developer to build a **Rule-based** & **NLP** based Multi-User Chat-bot for **DevOps Team** to reduce the internal manual work.
- The client's technical support team needed to input commands multiple times for fetching similar information from the system.
- As a result, there was high mean time to resolution (MTTR). The client wanted to automate this process to improve productivity, better resource utilization, and quicker root-cause analysis.
- Reduction in time required for resolution and RCA (root cause analysis)
- The number of tickets raised by the client's support team for fetching information reduced by **40%**.
- Getting Dockers Logs, Check health of applications, Restarting Dockers, IAM Authentication, creating incidents are some of the use cases implemented.
- Technologies Used: **Python-Flask, NLP, Jupyter Notebook (Anaconda), Ngrok, Linux.**

Case Study: https://www.gspann.com/resources/blogs/industrial-chatbots-use-cases-in-devops

Project: **Autobot**

- Developed NLP Based Autobot.
- Mimic ticket handling in production Environment.
- Based on incident raised by Support/Production Team, Classifying the Incident and fetches the required information from JIRA API.
- Assign the Detected Incident to corresponding person as per predefined Roles.
- Auto closing the issue as soon as assignee approves it.
- Technologies Used: **Python-Flask, NLP, Jupyter Notebook (Anaconda), JIRA**

Case Study: https://www.gspann.com/resources/case-studies/natural-language-processing-chatbot-for-efficient-technical-support

---

Project: **CR Inventory Management using Predictive Analytics**

Client: Charrles Routte

- Performed EDA using HIVE Queries to gain valuable insights from available salesdata.
- Forecasted **Daily** and **weekly** Sales to maintain the inventory stocks as per predictions.
- Finally, mapped the predicted inventory with weekly Forecasted sales.
- Implemented Workflow in **Azure MLStudio**.
- Technologies Used: **Python, Jupyter Notebook (Anaconda), HIVE**, **Tableau, Azure MLStudio.**

Project: **Web Scrapping Using Python**
Client: Kohl's INC Ltd

Scrapping Live Data from Azkaban Job Scheduler

- Scrapped the live data generated through Big data Map Reduce work via Azkaban Scheduler UI using python Selenium.
- Generating Summary reports of all jobs running day from scrapped data.
- Sending mails automatically based on predefined frequency to clients using Windows Task Scheduler.
- Technologies Used: **Python-Selenium, Jupyter Notebook, Windows TaskScheduler**

Monitoring the Recommendations of Shopping Website

- To monitor the performance to **Recommender system** for every 15 mins built on MLTechnique.
- Scheduled script to get the displayed recommendation on a webpage from specific channel (Mobile, Tablet, Website) on hourly bases.
- Validating if recommendations are being served on website
- Made Automatic mail delivery system through python to send the scrapped recommendations displayed on webpage to the client.
- Technologies Used: **Python-Selenium, Jupyter Notebook, Windows TaskScheduler**

Project: **BEAT (Big Data and ETL Automation Tool)**:
Client: In-house Product

- Worked as Backend Python **Django** Developer
- Automating ETL Workflow validations by generating executable queries
- Fetching the Data from various RDBMS Systems or similar databases such as **Big Query (GCP), MySQL, SQL-SERVER, Amazon S3** using python connectors
- Profiling the data in various aspects as result to perform the Quality Check of the Data before and after migration.
- Report generation by consolidating all QA outcomes.
- JIRA Integration to raise the bugs, defects from BEAT to track the issues.
- Technologies Used: **Django, React JS, Pandas, RPA (Testing), HTML, CSS, jQuery.**

EXTRA CURRICULAR ACHEIVEMENTS

- 10th class school **Topper**.
- Received gold medal for achieving **100%** in Science in S.S.C
- Trained **30+** newly joined Fresher's as Internal **Python Trainer** in GSPANN
- Recognized as the best performer and Received a **Shining Star Award** for the year 2019-20 especially for building NLP Chatbot.

PERSONAL DETAILS

Father's Name	:	K. Srinivasa Rao
Hobbies	:	Coding, Painting, Listening to music, and Reading books.
Languages Known	:	English, Telugu.
LinkedIn profile	:	www.linkedin.com/in/pavan-kumar-a46b7897
Git-Hub	:	https://github.com/Pavvan-K
Website	:	https://analyticswithr.weebly.com
Medium	:	https://medium.com/@kpavankumar_19821
Address	:	Plot No: 301, Surya Chandra residency, Prashant Nagar colony, Kothaguda, Kondapur-500084.

DECLARATION

I do hereby the declared above information is true to the best of my knowledge and belief.

Place: Hyderabad,

Date:
